Why do Java Developers choose Spring today?

SPRING IO EXECUTION:

Spring Boot

Rob Winch

@rob_winch

@Controller

```
class ThisWillActuallyRun {  
    @RequestMapping("/")  
    @ResponseBody  
    String home() {  
        "Hello World!"  
    }  
}
```

SPRING BOOT Demo

app.groovy

```
@RestController
class HelloController {
    @RequestMapping("/")
    String hello() {
        "Hello Boot"
    }
}
```

```
import org.springframework.web.bind.annotation.RestController
// other imports ...
```

```
@RestController
class HelloController {
    @RequestMapping("/")
    String hello() {
        "Hello Boot"
    }
}
```

```
}
```

```
import org.springframework.web.bind.annotation.RestController
// other imports ...
```

```
@Grab("org.springframework.boot:spring-boot-web-starter:1.0.0.RELEASE")
```

```
@RestController
```

```
class HelloController {
    @RequestMapping("/")
    String hello() {
        "Hello Boot"
    }
}
```

```
}
```

```
import org.springframework.web.bind.annotation.RestController
// other imports ...
```

```
@Grab("org.springframework.boot:spring-boot-web-starter:1.0.0.RELEASE")
```

```
@RestController
```

```
class HelloController {
    @RequestMapping("/")
    String hello() {
        "Hello Boot"
    }
}
```

```
static void main(String[] args) {
    SpringApplication.run(HelloController, args)
}
}
```

```
import org.springframework.web.bind.annotation.RestController
// other imports ...

@Grab("org.springframework.boot:spring-boot-web-starter:1.0.0.RELEASE")
@EnableAutoConfiguration
@RestController
class HelloController {
    @RequestMapping("/")
    String hello() {
        "Hello Boot"
    }

    static void main(String[] args) {
        SpringApplication.run(HelloController, args)
    }
}
```
